

# Electric drive

Efficient, comfortable and intriguingly dynamic

Powertrain systems and electrified mobility

Set out at full torque and greater range

## economical and efficient

in terms of fuel savings and local CO<sub>2</sub> emissions compared to conventional internal combustion engines

## driving pleasure

set out at full torque

- ▶ No fuel consumption and no local CO<sub>2</sub> emissions
- ▶ High motor efficiency increases range or reduces the need for battery capacity
- ▶ Optimum cost-benefit ratio through customized design and simultaneous use of a modular system
- ▶ Improved dynamics and more fun driving because full torque is available immediately when driving off
- ▶ The high-voltage batteries are optimized for high energy density and great range
